Aims and Scope

All aspects of insect physiology are published in this journal which will also accept papers on the physiology of other arthropods, if the referees consider the work to be of general interest. The coverage includes endocrinology (in relation to moulting, reproduction and metabolism), pheromones, neurobiology (cellular, integrative and developmental), physiological pharmacology, nutrition (food selection, digestion and absorption), homeostasis, excretion, reproduction, and behaviour. Communication on structure, new methodology, and applied entomology can be published if the subject matter has an explicit bearing on the physiology of arthropods. Review articles are also welcomed.
